Response to Amendment

Applicant's arguments filed July 21, 2003, have been fully considered but they are not deemed to be persuasive.

Applicant's arguments with respect to claims 1-5, 12 and 13 have been considered but are deemed to be moot in view of the new grounds of rejection.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

Claim 7 is rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 7 line 1 "2" should be --1--, since claim 2 has been canceled.

Claim Rejections - 35 USC § 102

Claims 1-5 are rejected under 35 U.S.C. § 102(b) as being clearly anticipated by either Fleury or Horton et al.

Claim Rejections - 35 USC § 103

Claims 1-5, 12 and 13 are rejected under 35 U.S.C. § 103 as being unpatentable over Trabbic in view of Meier. Trabbic discloses a hydraulic closed circuit comprising a hydraulic motor (12) having preferred feed and preferred discharge main pipes (20, 22); a tapping circuit comprising a single tapping and removal valve (328) connected to the discharge main pipe by a tapping pipe (326) and to a reservoir (390) by a removal pipe; wherein the tapping and removal valve is contained within a cartridge (see e.g. fig 2, 4) mounted to the hydraulic circuit; but does not disclose that the motor includes a casing defining an internal space and a cylinder block disposed therein, or that the removal pipe is connected to the internal space of the hydraulic motor.

Meier teaches, for a hydraulic closed circuit comprising a hydraulic motor (26A) having preferred feed and preferred discharge main pipes communicating with the hydraulic motor; a tapping circuit comprising a single tapping and removal valve (42) connected to the discharge main pipe by a tapping pipe and to a reservoir by a removal pipe (46); that the motor includes a casing defining an internal space and a cylinder

Art Unit: 3745

block disposed therein, wherein the removal pipe can be connected to the internal space of the hydraulic motor (column 4 line 45-50).

Since the connection of the removal pipe of Trabbic and Meier are functionally equivalent in the hydraulic closed circuit art; it would have been obvious at the time the invention was made to one having ordinary skill in the art to make the motor of Trabbic include a casing defining an internal space and a cylinder block disposed therein, as taught by Meier; and to connect the removal pipe of Trabbic to the internal space of the hydraulic motor, as taught by Meier, as a matter of engineering expediency.

Inherently there is a pipe connecting the internal space of the motor to the reservoir, similar to that connecting the pump casing to the reservoir. If not it would have been obvious at the time the invention was made to one having ordinary skill in the art to connect the internal space of the motor of Trabbic to the reservoir by a pipe, for the purpose of draining fluid from the motor case to the reservoir.

Conclusion

Claims 16 and 17 are allowed.

Claims 6, 8-11, 14 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
